Position	Place	Prize																		
1	1st:	\$1,328																		
2	2nd:	\$830																		
3	3rd:	\$498																		
4	4th:	\$365																		
5	5th:	\$299																		

This quick guide showed using the clock to control the tournament. The program is designed to have the tournament controlled from "Tournament Control" view. It is possible to control from the clock but controlling the tournament from "Tournament Control" is recommended. Poker Desk is designed to run multiple instances of the program. For example you might have on instance of Poker Desk open controlling the tournament, then you would open another instance of Poker Desk to display clock, and a third instance open display wait list to players, and an fourth instance open entering player on the wait list. Additionally instance can be running on any network computer, so any of these instances of Poker Desk could be running on the same computer or running on different computer.
